WEBPAGE CASE STUDY

Green Valley College

A beginner-friendly guide to the page, its structure, styling, purpose and output

WHAT THIS REPORT COVERS

Page features and content
HTML structure and CSS design
Intended uses and visible output
Important limits of the example page
Complete original HTML source in the appendix

1. Webpage overview

The supplied file is a single-page college information website titled **Green Valley College**. It presents sample information about the college in a clear top-to-bottom order. Visitors can use the navigation links to jump to named sections within the same page.

Page type	Static, single-page college information site

Built with	HTML for content and structure; CSS inside the HTML file for appearance
Main layout	Header, navigation bar, welcome banner, information sections, cards and footer
Interaction	In-page navigation links only; no working form or backend

2. Features and page content

College identity and welcome message

A dark-blue header shows the college name and motto. A contrasting banner welcomes visitors and announces that admissions are open for the new academic year.

Jump navigation

Seven links point to the About, Departments, Faculty, Admissions, Facilities, Events and Contact sections. Their #fragment targets match the corresponding section IDs, so the browser can jump down the current page.

About and departments

The About section introduces the college and student activities. Four department cards summarize Computer Science, Mechanical, Electrical and Civil programs.

Faculty, admissions, facilities and events

Cards present three sample faculty profiles, four suggested admission steps, three campus facilities and three example events. The repeated card format makes these groups easy to scan.

Contact and footer

The final content section lists an email, phone number and address. The footer displays a 2026 copyright notice for the college.

3. How the webpage was created

The document uses standard HTML elements to give the content meaning and order. Its CSS is written in a **<style>** block in the document head, so the page structure and styling are kept together in one file.

HTML structure

- **<!DOCTYPE html>** declares an HTML document, and **<html lang="en">** identifies English as the page language.
- **<head>** contains the page title and the embedded CSS rules. **<body>** contains what visitors see.
- **<header>**, **<nav>** and **<footer>** organize the top, navigation and bottom of the page.
- **<section>** groups related content. Each section has an **id** such as about or events, used by the matching navigation link.
- ** ** and ** ** group related cards. Headings (<h1>, <h2>, <h3>) and paragraphs (<p>) provide the text hierarchy.

CSS styling

The style rules select HTML elements (such as **body**, **header** and **section**) or reusable classes (such as **.banner** and **.card**). They set fonts, colors, spacing, borders and alignment.

- The body uses Arial, a light-blue background and dark-blue text. The header and footer use dark blue with white text.

- The navigation bar and content sections use white backgrounds. The banner uses steel blue, white text and generous padding to stand out.
- The card container uses Flexbox: **display: flex** lays cards in a row, **flex-wrap: wrap** allows them to move onto another row, and **justify-content: center** centers the group.
- Cards have a light-blue fill, dark-blue border, padding and margins. The declared width is 250px, so the browser may wrap cards when the available space is limited.

In short, HTML defines what each part means and contains; CSS controls how those parts look and are arranged.

4. Uses and audience

As a demonstration or classroom project, this page can show how to organize institutional information, create section links, apply color and spacing, and repeat a card pattern. A real college could use a page with these sections to introduce courses, staff, admissions steps, facilities, events and contact channels, after replacing the sample copy with approved current information.

The page is informational. It can help visitors find content quickly, but it does not submit an application, book a visit, send a message or retrieve live college data.

5. Output and appearance

When opened in a web browser, the page appears as a vertically scrolling college homepage. At the top is a dark-blue title area with centered white text, followed by a white navigation strip. A broad steel-blue welcome banner comes next. Below it are white content panels on a light-blue page background. Department, faculty, admission, facility and event information is arranged in pale-blue bordered cards. A dark-blue footer closes the page.

Page background	Header / footer / headings	Welcome banner	Panels
lightblue	darkblue	steelblue	white

6. Important limits and accuracy notes

Placeholder details: The email uses the reserved example domain greenvalleycollege.example; the phone number and street address are sample-looking details. Treat all contact information as illustrative, not verified contact information.

No form or backend: There is no HTML form, submission button, server connection, database or application-processing logic in the supplied file. The admissions section describes steps in text only.

Static content: Courses, faculty, events and admissions status are written directly into the HTML. They will not update automatically. The content should be checked and replaced before any real publication.

Navigation scope: The links jump to sections on this same page; they do not open separate pages.

7. Conclusion

This is a beginner-friendly example of a static information website. It combines semantic page regions, simple in-page navigation and a repeated Flexbox card layout with a consistent blue-and-white theme. The full

original HTML is reproduced next so the structure and CSS can be studied directly

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>

    <title>Green Valley College</title>
    <style>
        body {
            font-family: Arial;
            margin: 0;
            background-color: lightblue;
            color: darkblue;
        }

        header {
            background-color: darkblue;
            color: white;
            text-align: center;
            padding: 20px;
        }

        nav {
            background-color: white;
            text-align: center;
            padding: 15px;
        }

        nav a {
            color: darkblue;
            text-decoration: none;
            margin: 10px;
        }

        .banner {
            background-color: steelblue;
            color: white;
            text-align: center;
            padding: 50px 20px;
        }

        .banner h2 {
```

```
            font-size: 32px;
        }

        section {
            background-color: white;
            margin: 20px auto;
            padding: 20px;
            width: 85%;
        }

        h2 {
            color: darkblue;
            text-align: center;
        }

Green Valley College

Learn Today, Lead Tomorrow

About Departments Faculty Admissions Facilities Events Contact

Welcome to Green Valley College

Build your knowledge and prepare for a bright future.

Admissions are open for the new academic year.

About Our College

Green Valley College provides students with a supportive place to learn and grow. Our college focuses on education, practical skills, and student development.

Students can take part in academic activities, sports, cultural events, and community programs.

Departments and Courses

Computer Science Department

Courses include Computer Science Engineering and Information Technology.

Mechanical Department

Students learn about machines, manufacturing, and product design.

Electrical Department

Courses cover electrical systems, circuits, and power generation.

Civil Department

Students study the design of buildings, roads, and bridges.

Faculty Profiles

Dr.Suneetha

Department:head of Computer Science

Teaches python programming

Mr.Uma Maheswarao

Department: Web Development

Teaches web development and programming.

Mr.Venugopal

Department: Python Programming

Teaches python programming and related topics.

Admissions Procedures

Step 1: Choose a Course

Review the departments and select the course you wish to study.

Step 2: Submit an Application

Complete the college application form and provide the required documents.

Step 3: Application Review

The admissions office reviews your application and contacts you with the next steps.

Step 4: Confirm Admission

Follow the instructions from the admissions office to confirm your place.

Campus Facilities

Library

A quiet place with books and study areas for students.

Computer Laboratories

Laboratories where students can practise computer skills.

Sports Ground

Open space for sports, exercise, and college activities.

College Events

Welcome Day

An event to welcome new students

Science Exhibition

Students display projects and

Annual Sports Day

Students take part in sports and

areas for students.

practise computer skills.

and college activities.

College Events

Welcome Day

An event to welcome new students to the college community.

Science Exhibition

Students display projects and share ideas from their subjects.

Annual Sports Day

Students take part in sports and team activities.
